FILTRATION UNDER SINK SYSTEM INCLUDES:

- *MULTI-STAGE FILTRATION UNIT - 30101*
- *SAFETY VALVE-LEAK DETECTION - AS-414*
- *CONNECTION FITTINGS INCLUDED AS SHOWN.*

30101

AS-414

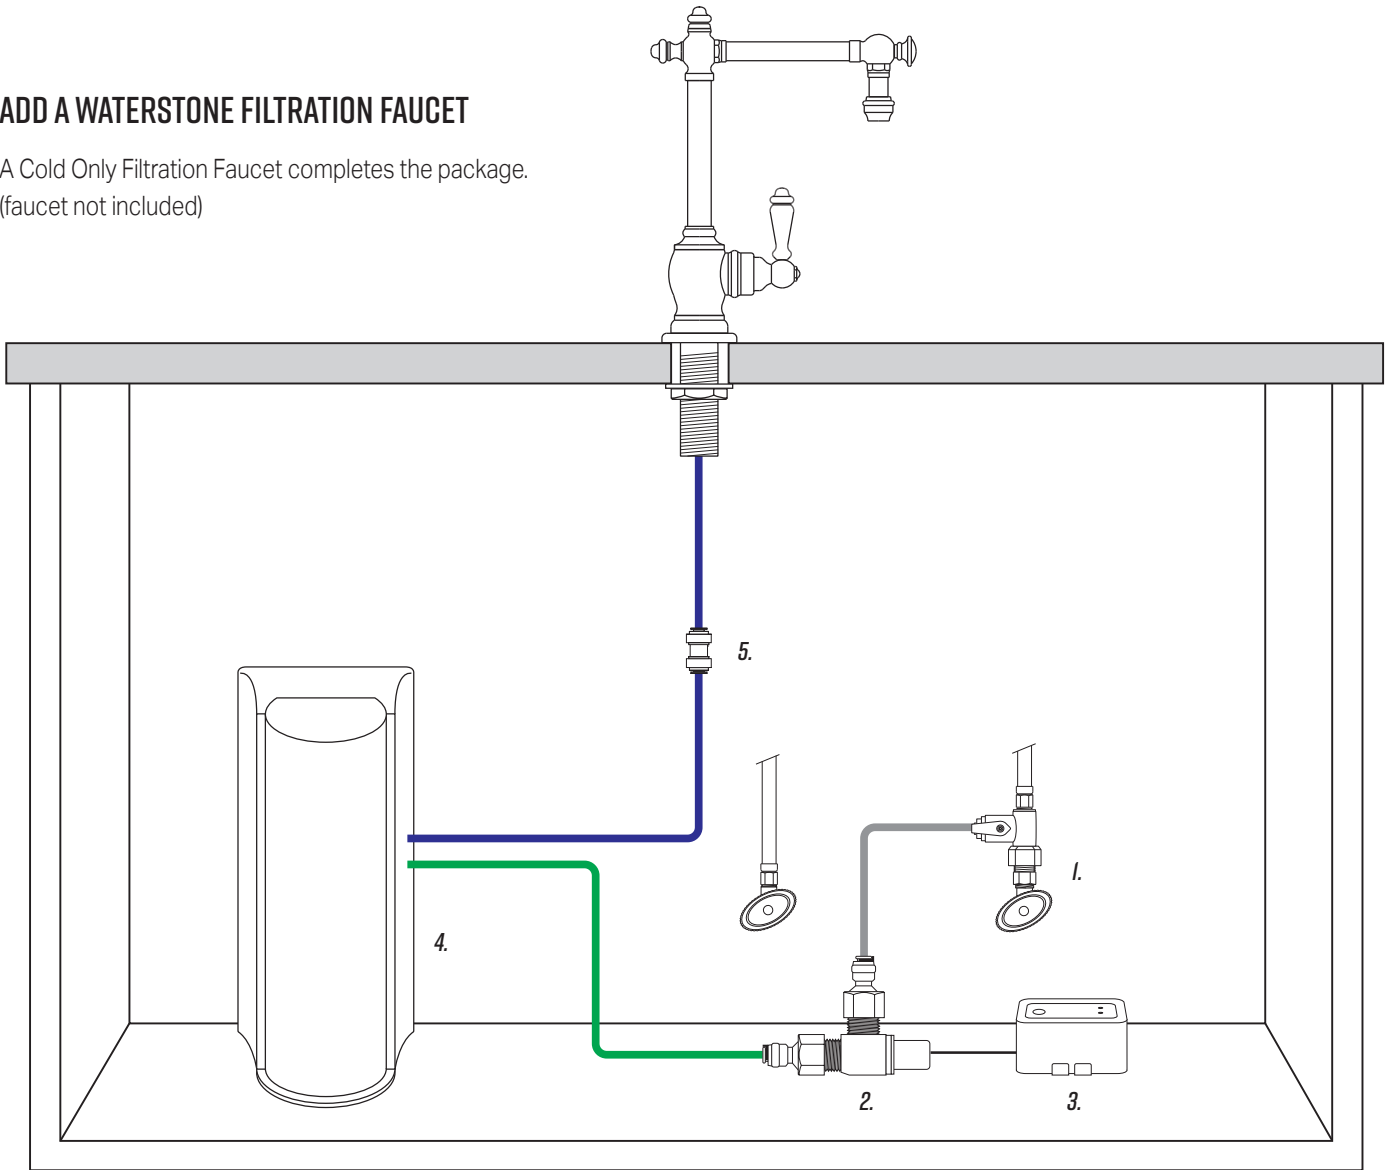

The Waterstone Filtration Under Sink System gives you great tasting water and the security of kitchen flood prevention in one under sink package. The Waterstone Multi-Stage Filtration System is compact and has been designed to provide optimum filtration in a single cartridge unit. When used with a Waterstone Filtration Faucet, removes sediment, chlorine, bad taste and odor from municipal drinking water. The integrated multi-stage cartridge contains two sediment pre-filters and a GAC (granulated activated charcoal) primary filter that work together to remove sediment, chlorine taste and odor. Waterstone's Safety Valve Leak Detection Units are ideal for minimizing water damage when these disasters occur. Our Leak Detector automatically shuts off the water source when it detects moisture. Once the valve shuts off, the unit sounds off with an audible alarm, like a smoke detector, to let you know of a problem.

FILTRATION UNDER SINK SYSTEM

IN ONE COMPLETE PACKAGE

ADD A WATERSTONE FILTRATION FAUCET

A Cold Only Filtration Faucet completes the package.
(faucet not included)
